

As the European market leader for technical sun shading products with more than 60 years of experience, Warema has a wide and varied range of products with precision solutions for any requirements. The offer ranges from external sun shading systems to internal sun shading systems. These products facilitate optimal control and use of daylight and the sun's warmth. Create an enjoyable atmosphere at home with Warema.

A Pleasant Atmosphere for  
Every Building

## Cassette Awning Type K-70

With its linear design, the WAREMA K-70 cassette awning perfectly matches the trend towards flat and lean-to roofs as well as cubic designs. Set fascinating design standards in your oasis of well-being with this elegant cassette awning. The optional valance roller blind protects you from low sun and light evening breezes, and guarantees more privacy on your patio.

## Characteristics

Integrated WMS comfort control with WMS wind sensor for automatic retraction of the awning in case of wind.

In the evening, indirect lighting ensures a pleasant feel-good atmosphere.

Brilliant accessories (optional): Integrated LED stripes in the front profile and cassette, radiant heater, valance roller blind, patio side screen, patio frame.

# External Venetian Blinds

The term “sun shading” includes the efficient control of the room climate. Since they absorb 60–80% of solar irradiation before it reaches the window pane, external Venetian blinds are ideally suited for this job. They keep the room nice and cool. In winter, they let light and warmth penetrate the windows to save heating energy. And they are also an ideal tool for adjusting the room brightness and can even darken a room sufficiently for presentations. It goes without saying that they blend excellently into architectural concepts. This is because they are WAREMA solutions, uncompromising in terms of design and quality.

## Characteristics

With beaded slats

Dimming

Self-supporting

Front-mounted

With flat slats

Design External Blinds

Wind-resistant

Assymetrical

- 01 Mounting example
- 02 Slats with self-cleaning effect
- 03 New guide profile end cap
- 04 Get into the sun faster

## Zip / Window Awning

The latest sun shading systems must be able to fulfill many different requirements. During the day, they should provide pleasant shade, whereas in the evening, they should allow as many of the last rays of the sun to enter the room as possible. They should keep the room cool in summer but help to save energy in winter. All of these requirements are fulfilled by WAREMA sun shading solutions.

### Facade Awning

Can be used flexibly with many technical refinements; facade awnings are the professional large-area shading solution for practically every building.

### Vertical awnings

Robust technology and perfect functionality and quality make WAREMA vertical awnings a classic feature for shading vertical glazed surfaces such as windows with single and multiple openers.

## Black Out Awning

The WAREMA black-out unit provides perfect protection from light, as it completely darkens a room. The blind is completely opaque, infrared-proof and flame retardant in accordance with DIN 4102 B1 or non-flammable in accordance with DIN 4102 A2. All materials are UV-resistant, corrosion-proof and rot-proof.
